NAME OF PROCEDURE:

Standard Operating Procedure for recruitment of participants for LightBAR in Denmark

1 PURPOSE AND APPLICABILITY

This document outlines the procedure for recruitment for the LightBAR DK by outlining the recruitment procedure that directs participants through a screening process and into the Danish trials.

A total of 250 individuals aged 18 - 60 years will be randomized in the study.

Participants will be recruited from bariatric waiting list at the study site.

Participants must be eligible and willing to undergo bariatric surgery to be enroll into the LightBAR trial.

The bodyweight of the participant may not exceed 250 kg at the time of inclusion.

2 PERSONNEL QUALIFICATIONS AND RESPONSIBILITIES

- All staff must be trained before starting the recruitment and screening process and ensure all data is collected in line with this SOP.
- All staff are responsible for making sure that each participant has read and understood the participant information sheets.
- All staff must ensure they can answer emails and phone calls from the interested public in a professional manner.

3 PROCEDURE

3.1 Recruitment Procedure for LightBAR Denmark

Each trial site is responsible for recruitment of participants to their trial site, unless other agreements are made.

Each site should continue recruitment until the target number of participants are randomized.

- AHH-site: 90 randomized participants
- AUH-sit: 60 randomized participants
- SJV-sit: 60 randomized participants

Participants will be recruited via bariatric waiting list from each trial site.

The following step should be included in the recruitment procedure (see Figure 1).

1. The investigator will contact potentially eligible participants by letter (via e-boks) with information on the trial and how to contact the trial team by email/phone for further information. This letter will contain:

3.2 Cover letter

- a. participant information

- b. informed consent form
 - c. the folder "Forsøgspersoners rettigheder i et sundhedsvidenskabeligt forskningsprojekt".
2. Trial team will phone the potential participants within 2 weeks, and inform them about the study by phone. Or the potential participant can phone the trial team.
3. If participants are willing and seemingly eligible, they will be invited for the information visit (in person or virtually) where information is provided verbally.
4. Before inclusion the potential participant should be informed about both interventions (Bariatric surgery and IWL) and declared suitable for bariatric surgery by a clinician.
5. As each trial site has individual standard procedure and information strategy for bariatric surgery, these can be incorporated into the recruitment process. The final recruitment process can thereby differ between sites.

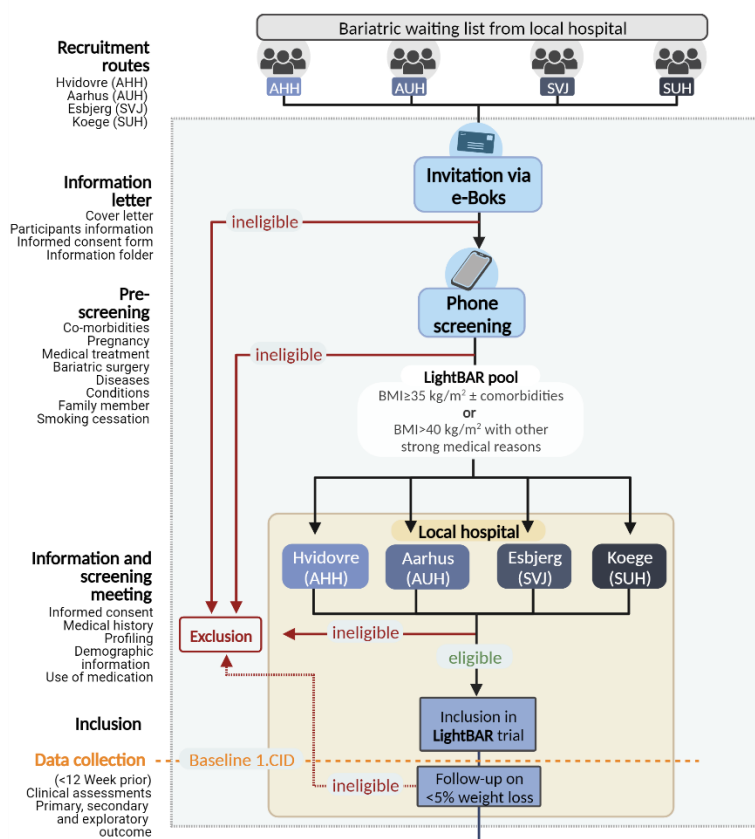

Figure 1 Illustration of general recruitment flow

3.3 Recruitment at Hvidovre Hospital

Recruitment strategy at AHH can be seen in Figure 2. After inclusion baseline visit will be scheduled by the trial staff.

To the extend possible we will try to schedule first diatician appointment in continuation of the baseline visit. The diatician will follow the participant until 5% weight loos is achieved and the participant can be randimozed. In this periode the participant will follow the standard bariatric program consisting of an group session on healthy diatary choich and a individual session with a diatician where a plan is made for the participant on how to achieve the 5 % weight loss.

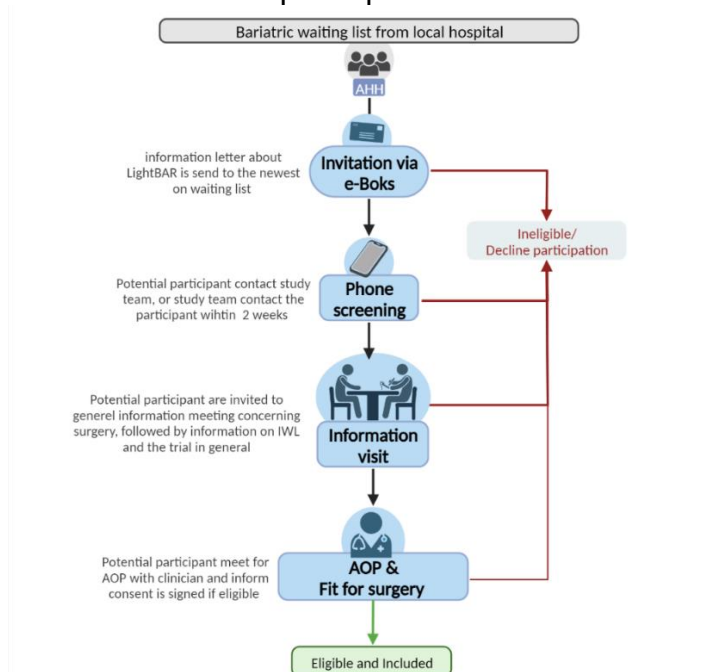

Figure 2 recruitment strategy at AHH

3.4 Recruitment at Esbjerg Sygehus

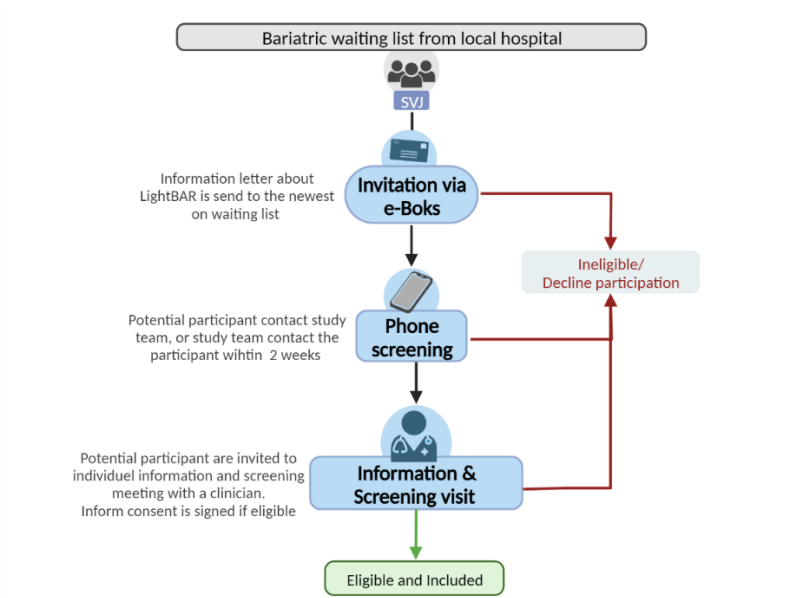

Figure 3 recruitment strategy at SVJ

Recruitment strategy at SVJ can be seen in Figure 3. After inclusion baseline visit will be scheduled by the trial staff.

3.5 Recruitment at Århus Hospital

3.6 Recruitment at Køge Sygehus

4 EXPECTED RESULTS, TROUBLESHOOTING AND CORRECTIVE ACTION

Recruitment response rates will be collected. We will need to recruit a target of approximately 2 (AHH), 1.5 (SJV, AUH) and 1 (SUK) participants per week throughout the recruitment phase (first quarter 2024 – third quarter 2025). If these pre-set targets are not met, advice will be sought from the Trial Steering Committee. A decision will be made to extend the recruitment period or explore additional recruitment strategies (e.g., involve relevant influencers, broaden the recruitment area).

If and eligible potential participant decline to participate in the study, they will be ask to perform an interview where the focus is to understand the reason behind the decision made, and NOT to make the participant change their mind. Results from these interviews should be used to improve recruitment.
